1. How about if I want the first (red) paragraph to be a block or something that can be moved around or centered ?

I created a CSS rule you can apply to center lists. To properly center a list you have to put it in a division that gets centered but just doing that also centers the bulleted items which I really hate the look of.

So I added this to your page to center the red paragraph.

```
<div class="center-list">
<ul>
  <li style="text-align: left;"> <a style="color: #ff0000;"
href="https://patchencalifornia.com/about-us/job-descriptions#Tduty">TREE HANDLER
DUTIES</a> </li>
  <li style="text-align: left;"> <a style="color: #ff0000;"
href="https://patchencalifornia.com/about-us/job-descriptions#Cduty">CASHIER
DUTIES</a> </li>
  <li style="text-align: left;"> <a style="color: #ff0000;"
href="https://patchencalifornia.com/about-us/job-descriptions#Sduty">SANTA
DUTIES</a> </li>
  <li style="text-align: left;"> <a style="color: #ff0000;"
href="https://patchencalifornia.com/wp/wp-content/uploads/OldTownLayout.jpg">OLD
TOWN FARM LAYOUT</a> </li>
  <li style="text-align: left;"> <a style="color: #ff0000;"
href="https://patchencalifornia.com/wp/wp-content/uploads/RanchoLayout.jpg">RANCHO FARM LAYOUT</a> </li>
</ul>
</div>
```

2. In the MINIMUM REQUIREMENTS paragraph, what do you think about that approach to bolding the numbers in an ?

That's as good as any options I saw.

3. When indents are added to a the enunciator changes. Too bad they don't do a similar thing for s, like dot to dash to chevron to smaller something. Is it change these characters globally?

You can use CSS to change the bullet.

```
<ol style="list-style-type: circle;">
```

Here are the acceptable options:

- disc
- circle
- square
- decimal
- decimal-leading-zero
- lower-roman
- upper-roman
- lower-greek
- lower-latin
- upper-latin
- armenian
- georgian
- lower-alpha
- upper-alpha

none

Experiment with those values and decide which ones you'd like to display for each level and I'll create the CSS you can use by just adding a class to the top level .

4. There is a large space here and between the next 2 or 3 paragraphs. The code in each case looks different but none seem to be able to get rid of that space.

<wnaioiy0.png>

Here's your code:

```
</ul>
&nbsp;
<h4>COMPENSATION</h4>
```

The non breaking space (@nbsp;) is causing the extra space. I removed it.

5. I could have formatted the blue-quotes sections but I couldn't find a way to get a similar result.

I'm not sure what you wanted to do here. Can you explain this comment more?

6. Please look things over and let me know you suggestions. Otherwise I am ready for the next lesson.

The Tree Handler link didn't work for two reasons.

First the URL was missing one level of the directory structure.

```
<li style="text-align: left;"> <a style="color: #ff0000;"  
href="https://patchencalifornia.com/about-us/administration/job-  
descriptions#Tduty">TREE HANDLER DUTIES</a> </li>
```

Secondly the anchor that it pointed to as incorrect. You had:

```
<h3 id="Tduty" style="text-align: center;">TREE HANDLER DUTIES</h3>
```

The correct syntax is:

```
<h3 name="Tduty" style="text-align: center;">TREE HANDLER DUTIES</h3>
```

Also I prefer to always use all lowercase in the URL, and that includes anchor tags. If you're telling someone the URL over the phone, it's a lot easier to say, "In all lowercase, type..." then have to keep saying Uppercase, Lowercase for each letter. Unlike the domain name, the rest of the URL is case sensitive.

patchencalifornia.com/test and patchencalifornia.com/Test are two different pages.

I notice you constantly put a space before an exclamation mark. No need for that and it makes it harder to read.

Your PayPal address needs the .com
